People generally have two kidneys. However, some people may have only one kidney due to being born with only one kidney, donating a kidney to be transplanted into another person, or having a kidney removed for the management of some disease.

1.		w many kidneys do you currently have that you were born n? (Do not count any transplant kidneys you have received)	1	One
	a.	If you checked "One", please check one of the following:		I was born with only <i>one</i> kidney
			2	I donated a kidney that was transplanted into another person
			3	I had an entire kidney removed for some other reason.
	b.	If you have donated a kidney that was transplanted into another person or had an entire kidney removed for some other reason, in what year did this occur?		(vear) ☐ <sub>ss</sub> Don't know
